

Aprycus Spectrum Protect workshop for Administrators (AP-SPA03)

This three day instructor-led workshop will focus on basic administration of an IBM Spectrum Protect environment. It's aim is to provide hands-on expertise with fast ability to deploy after the class is finished. Language is Dutch or English.

Audience

System Administrators, relatively new to managing a Spectrum Protect environment.

Prerequisites

Ability to navigate in a Windows environment.

Objectives

Upon completion students will be able to manage a Spectrum Protect environment:

- Have insight into Spectrum Protect concepts and core product functionality
- Understand storage methodology and data storage management options
- Perform backup, restore, archive and retrieve operations
- Decide upon data movement requirements, scheduling and retention policies to meet business requirements
- Automate and monitor client and administrative tasks and events
- Configure the IBM Spectrum Protect database and storage pools for protection
- Understand and use the administrative and client interfaces
- Perform daily housekeeping tasks required to protect the IBM Spectrum Protect environment

Additional Topics

Focus in the class is to learn about the core functionality of Spectrum Protect. Additional topics can be added upon request.
